NOAA COASTAL MAPPING PROGRAM AIRBORNE POSITIONING REPORT
PROJECT T-0027
WESTERLY TO LITTLE COMPTON

INTRODUCTION

To support Project T-0027 of the NOAA Coastal Mapping Program, Quantum Spatial tasked Richard Crouse and Associates with obtaining the tide-coordinated MLLW digital photography on August 18, 2014. Details of all acquisition missions that yielded imagery that met NOAA radiometric and tide window requirements and that was used for data collection are described in the table below. All of the photographic acquisition missions were accomplished using one Piper Navajo. One NOAA approved Z/I DMC aerial camera equipped with forward motion compensation and stabilized camera mount were used for the acquisition of aerial photography. A Quantum Spatial Company produced near vertical, metric quality, tide-coordinated, kinematic Global Positioning System (GPS) positioned, aerial photography exposed along QSI defined flight lines covering the T-0027 project area.

Exposure Date	Film	Flight #	Stage	Exposure #'s
8/18/2014	Digital	30004	MLLW	0073 - 0031
8/18/2014	Digital	30005	MLLW	0031 - 0069
8/18/2014	Digital	30003	MLLW	0030 - 0001
8/18/2014	Digital	30002	MLLW	0001 - 0014
8/18/2014	Digital	30001	MLLW	0008 - 0001
8/18/2014	Digital	30009	MLLW	0013 - 0001
8/18/2014	Digital	30007	MLLW	0001 - 0010
8/18/2014	Digital	30005	MLLW	0032 - 0001
8/18/2014	Digital	30004	MLLW	0001 - 0032
8/18/2014	Digital	30006	MLLW	0008 - 0001
8/18/2014	Digital	30008	MLLW	0001 - 0014

The following is a summary of the film types, filters, altitudes and negative scales produced for each type of aerial photographic mission:

Digital photography for the entire project area was acquired using a 120mm lens at 10,000 feet AMT, 1:30,000 negative scale on August 18, 2014. The MLLW aerial photography was acquired over one photo acquisition mission on August 18, 2014.

POSITIONING:

One aircraft, Piper Navajo N3520X, was used to acquire the aerial photography and collect ABGPS data. Each acquisition aircraft was equipped with either POSAV Applanix Model 510 IMU units (Serial Numbers SN#2214 and/or dual frequency Trimble BD960 (SN#5210K23390) to collect the ABGPS and IMU data. CORS stations were used for base stations on the project, with at least two of these CORS stations being used to process each POSAV dataset to achieve the final photo center locations: ACU6, CTGR, MEDX, MELI, MEOW, MEWA, NCBI, NPRI, PNB6, URIL (See CORS location map and station details below).

Color aerial photography MLLW acquisition began
August 18, 2014 (13:09 to 15:34 GMT)

The QSI flight line configuration of seventeen flight lines was used for each acquisition mission.

Airborne GPS processing.

The airborne GPS receivers were employed on these flights and collected time-tagged (dual frequency) satellite carrier phase data simultaneously with the ground station receivers. NGS CORS and several Cooperative CORS served as ground stations during flight. 24 Hours after flight, the raw GPS data from the base stations is downloaded from NGS ftp server including the rapid ephemeris file for that flight date.

From the POSPac MMS GNSS-Inertial Tools User Manual, revision 7:

"The Applanix SmartBase module allows the user to construct a network of permanent GNSS reference stations accessible through the Internet, and provide reference receiver coverage over large project areas without requiring dedicated base receivers. SmartBase includes an in-built database search tool that generates a recommended network, and then acquires the reference receiver data via the Internet.

POSPac MMS with IN-Fusion technology provides multiple processing modes to handle different combinations of rover and reference GNSS data that can occur in survey missions. In addition to the SmartBase processing mode, POSPac MMS provides Single Base Station differential and Precise Point Positioning (PPP) processing modes. POSPac MMS implements inertially aided PPP (IAPPP) that overcomes some of the convergence problems in GNSS-only PPP due to GNSS data outages.

POSPac MMS software tools identify and compensate for sensory and environmental errors, compute an optimally accurate blended navigation solution and provide the means to view the results in a variety of formats. The sophisticated design of the POSPac MMS main Graphical User Interface (GUI) displays different types of data including real-time and post-processed data. All data can be viewed and selected in many different ways including the 2D Plan View, 3D View, and Points Spreadsheet." (PUBS-MAN-001768, 2012)

The program then solves the remainder of the dataset and re-computes the ambiguities (example, loss of lock). This software computes the Forward and Backward solution and combine these two solutions to provide an optimal solution. The resulting values are accurate photo coordinates, in Easting, Northing and Height exported to UTM18 projection. All photo Heights are computed relative to the base station coordinates and GEOID12a is applied to arrive at NAVD88 values.

IMU processing.

On several occasions, we employed IMU (Inertial Measurement Unit) whenever the equipment is available. Applanix IMU is utilized to compute the Exterior Orientation of each image at the moment of exposure. The method is by integrating Inertial Navigation solution by processing IMU data and the simultaneously collected GPS data along with observables of locally positioned GPS base station (CORS) on the ground. It computes the carrier phase GPS solution and then blends it with inertial data. Applanix' POSPAC MMS Version 7.0 was used. The resulting values are accurate photo coordinates, in Easting, Northing and Height (UTM19 projection), and each photo's attitude (Omega, Phi and Kappa in degrees). All the Heights are in NAVD88.

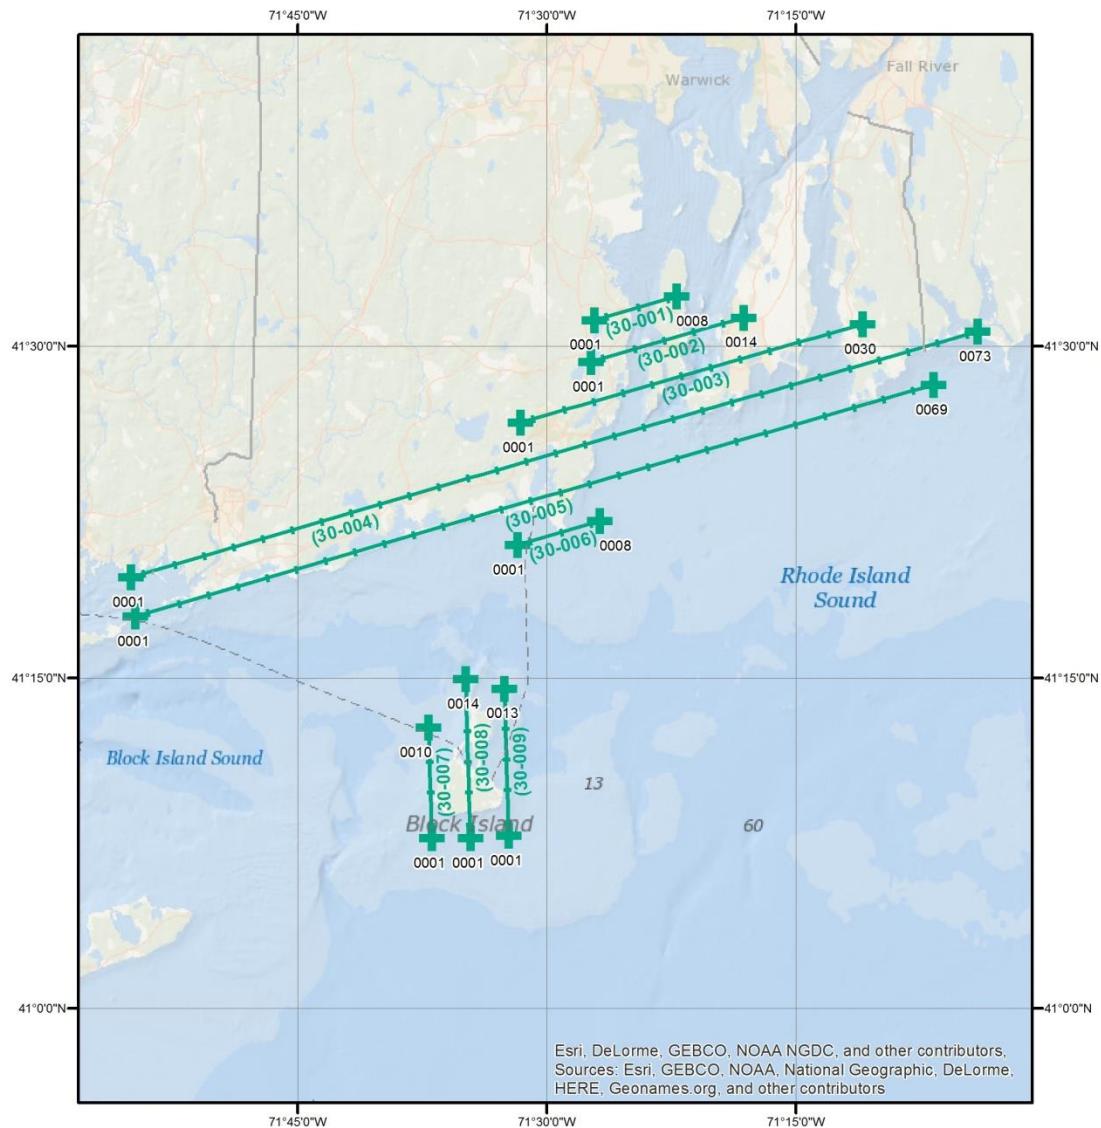

IMU data was not collected on every mission. IMU data is not a specified dataset required to be collected for this project and therefore the IMU data has not been incorporated into the aerial triangulation process.

FINAL RESULTS

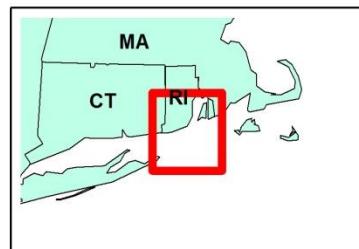

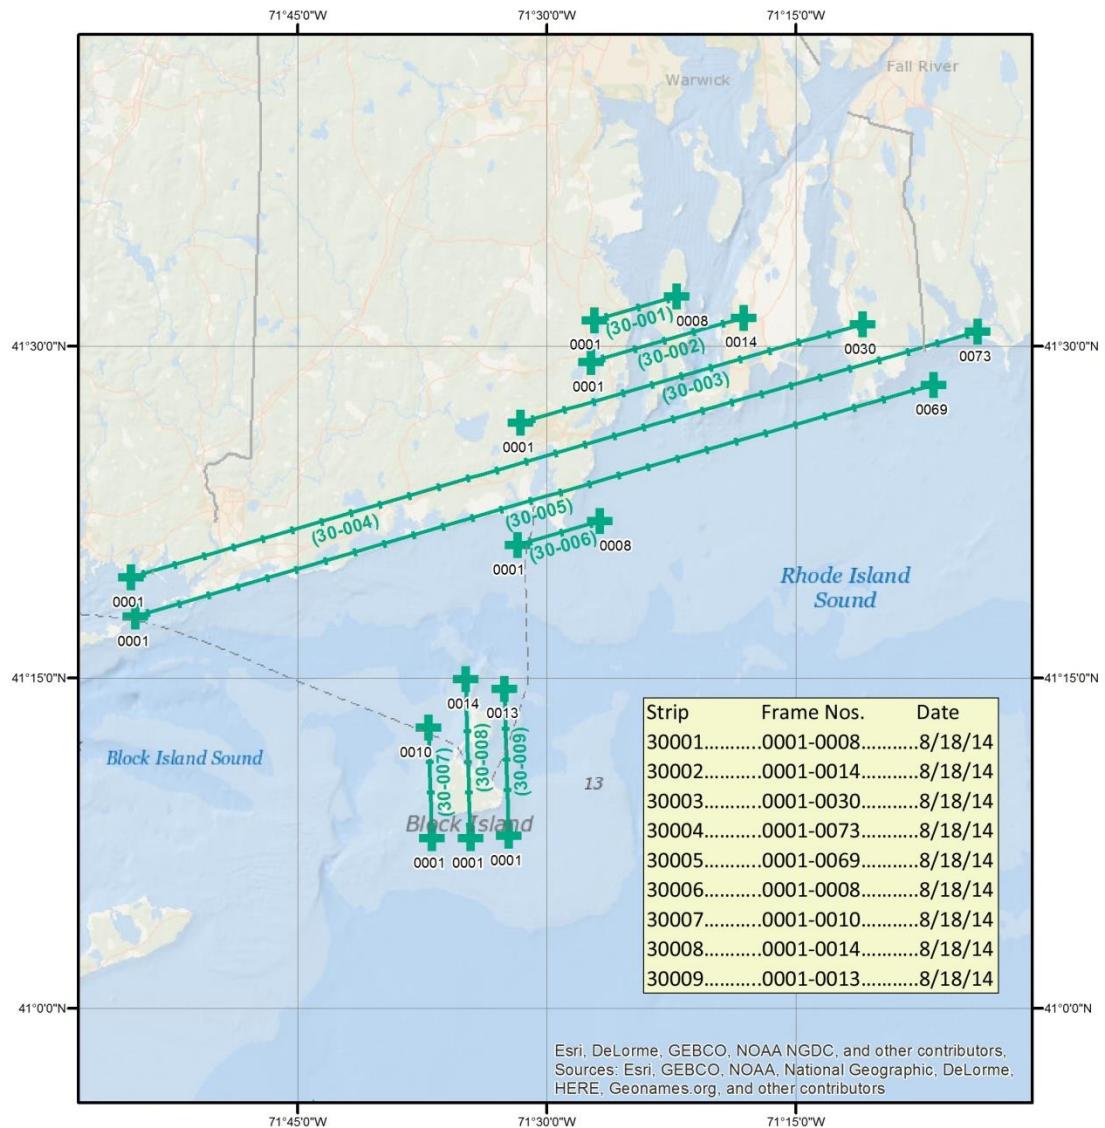

The final photo center locations were output into text files which were then imported into ZI Imaging's ISAT AT software for the point measurements and bundle adjustment phase.

DN9936

DN9936.NAD 83(2011) refers to NAD 83 coordinates where the reference
DN9936.frame has been affixed to the stable North American Tectonic Plate.

DN9936

DN9936.The coordinates are valid at the epoch date displayed above
DN9936.which is a decimal equivalence of Year/Month/Day.

DN9936

DN9936.The PID for the CORS L1 Phase Center is DN9937.

DN9936

DN9936.The XYZ, and position/ellipsoidal ht. are equivalent.

DN9936

DN9936.The ellipsoidal height was determined by GPS observations
DN9936.and is referenced to NAD 83.

DN9936

DN9936. The following values were computed from the NAD 83(2011)
position.

DN9936

DN9936;	North	East	Units	Scale Factor	
Converg.					
DN9936;SPC ME E	- 188,554.344	299,420.846	MT	0.99990000	-0

DK4436
DK4436
DK4436 The coordinates were established by GPS observations
DK4436 and adjusted by the National Geodetic Survey in August 2011.
DK4436

DK4436.NAD 83(2011) refers to NAD 83 coordinates where the reference DK4436.frame has been affixed to the stable North American Tectonic Plate.

DK4436

DK4436.The coordinates are valid at the epoch date displayed above DK4436, which is a decimal equivalence of Year/Month/Day.

DK4436

DK4436.The PID for the CORS L1 Phase Center is DK4437.

DK4436

DK4436.The XYZ, and position/ellipsoidal ht. are equivalent.

DK4436

DK4436.The ellipsoidal height was determined by GPS observations DK4436, and is referenced to NAD 83.

DK4436

DK4436. The following values were computed from the NAD 83(2011) position.

DK4436

		North	East	Units	Scale Factor	
Converg.						
DK4436;SPC ME E 11 26.3	-	87,289.826	278,335.621	MT	0.99990577	-0
DK4436;SPC ME E 11 26.3	-	286,383.37	913,172.78	sFT	0.99990577	-0
DK4436;UTM 19 09 34.3	-	4,922,104.163	518,123.587	MT	0.99960404	+0
DK4436!	-	Elev Factor	x Scale Factor	=	Combined Factor	
DK4436!SPC ME E	-	0.99999475	x 0.99990577	=	0.99990052	
DK4436!UTM 19	-	0.99999475	x 0.99960404	=	0.99959880

DE6262
DE6262. Formal positional accuracy estimates are not available for this CORS
DE6262.because its coordinates were determined in part using modeled
DE6262.velocities. Approximate one-sigma accuracies for latitude,
longitude,
DE6262.and ellipsoid height can be obtained from the short-term time
series.
DE6262.Additional information regarding modeled velocities is available
on
DE6262.the CORS Coordinates and Multi-Year CORS Solution FAQ web pages.
DE6262
DE6262.The coordinates were established by GPS observations
DE6262.and adjusted by the National Geodetic Survey in August 2011.
